

Fu's Subcutaneous Needling-FSN Seminar (Introductory Course)

Date: 23 October 2022 (10:00-18:00)

Venue: Cambridge REF: PINE-C2

Costs: £190

Fu's Subcutaneous Needling (FSN) is a newly developed acupuncture therapy by Dr Zhong-hua Fu in the 1990s. This modern acupuncture therapy uses a modified acupuncture needle to stimulate subcutaneous layer near to tighten muscle to treat musculoskeletal and other conditions.

FSN therapy is a very safe practice and extremely beneficial to those suffering from musculoskeletal conditions. For some acute pain conditions, such as muscular and ligaments strains, tennis elbow, or acute back pain, using the FSN technique can produce almost instant pain relief. Once you have gained this skill, you can work with this therapy effectively with confidence. It is regarded as "game changer" acupuncture therapy

In this one-day seminar, you will be introduced with

- **How FSN work**
- **Skills of insertion and manipulation**
- **Hands-on training and practice**
- **Commonly clinical complaint (neck pain) demonstration and management**

Once you have completed this introductory course, you may qualify to select certified FSN practitioners/trainer for further clinical training. After you completed all required training hours, you can join the FSN professional body FSNAE – the Fu's Subcutaneous Needling Association of Europe for further CPD training and obtain the malpractice insurance to practice FSN therapy.
